

### **TOOLBOX CONTENTS**

- Screwdrivers, including standard (straight-edged) and Phillips (cross-head) in various sizes: tools used to insert screws into various surfaces
- Claw hammer: a type of hammer used to insert and pull out nails in wood or wall surfaces
- Pliers, including slip joint and vise grip: tools used to cut and shape wires and to grip things firmly
- Crescent (adjustable) wrench: tool used to loosen and tighten nuts and bolts and in plumbing jobs, like fitting faucets
- Hand saw: tool for general cutting purposes on paneling and lumber
- Assorted nails, brads, screws, bolts, nuts and washers
- Tape measure: flexible tape marked in inches and feet, used for marking and measuring
- Flashlight with batteries (stored outside of flashlight): good for power outages and electrical work that requires you to turn off a circuit
- Putty knife: flat, metal-bladed knife used to spread wood filler or spackle compound into holes and cracks
- Utility knife: versatile tool used to cut floor tile, trim wallpaper, score lines and open heavy cardboard boxes
- Caulking gun: metal or plastic holder that dispenses caulk or adhesive from a cartridge
- Plunger: rubber suction cup on a wooden stick used to force out clogs in plumbing lines
- Handheld power drill: electric or cordless tool used to install screws into wood and metal with changeable bits (the part of the drill that makes the hole) for different drilling surfaces and screw sizes
- Carpenter's level: a tool that determines whether a surface is level; it is useful for installing shelves and hanging pictures
- Ladders, including extension and step: step ladders are free-standing and good for indoor and outdoor work; extension ladders, which are usually leaned against the side of your house, are for high outdoor work, such as gutter cleaning or repairing a roof
- Sandpaper in varying grades: rough paper used for smoothing various wood and wall surfaces
